

# Dividing Fractions (A)

Name: \_\_\_\_\_

Date: \_\_\_\_\_

Score: \_\_\_\_\_

Calculate each quotient.

$$1. \quad \frac{5}{2} \div \frac{3}{2} = \text{---} \times \text{---} = \text{---} = \text{---} = \text{---}$$

Inversion                      Result                      Simplify                      Convert ↓

$$2. \quad \frac{11}{6} \div \frac{16}{9} = \text{---} \times \text{---} = \text{---} = \text{---} = \text{---}$$

$$3. \quad \frac{3}{2} \div \frac{3}{2} = \text{---} \times \text{---} = \text{---} =$$

$$4. \quad \frac{4}{3} \div \frac{16}{7} = \text{---} \times \text{---} = \text{---} = \text{---}$$

$$5. \quad \frac{3}{2} \div \frac{18}{7} = \text{---} \times \text{---} = \text{---} = \text{---}$$

$$6. \quad \frac{3}{2} \div \frac{5}{4} = \text{---} \times \text{---} = \text{---} = \text{---} = \text{---}$$

$$7. \quad \frac{22}{9} \div \frac{7}{6} = \text{---} \times \text{---} = \text{---} = \text{---} = \text{---}$$

$$8. \quad \frac{10}{9} \div \frac{11}{6} = \text{---} \times \text{---} = \text{---} = \text{---}$$

$$9. \quad \frac{12}{5} \div \frac{7}{5} = \text{---} \times \text{---} = \text{---} = \text{---} = \text{---}$$

$$10. \quad \frac{5}{2} \div \frac{20}{7} = \text{---} \times \text{---} = \text{---} = \text{---}$$
