Subtracting Mixed Fractions (G)

Find the value of each expression in lowest terms.

1. $6\frac{1}{4} - 3\frac{3}{44}$

2. $3\frac{3}{38} - 2\frac{3}{10}$

3. $6\frac{1}{6} - 1\frac{11}{14}$

4. $7\frac{7}{15} - 2\frac{27}{40}$

5. $4\frac{7}{20} - 3\frac{1}{3}$

6. $11\frac{1}{6} - 2\frac{11}{12}$

7. $4\frac{9}{14} - 2\frac{16}{21}$

8. $5\frac{1}{3} - 2\frac{11}{13}$

9. $15\frac{3}{4} - 2\frac{1}{3}$

10. $11\frac{1}{3} - 8\frac{11}{19}$

11. $3\frac{28}{39} - 3\frac{4}{21}$

12. $4\frac{1}{2} - 1\frac{13}{38}$

Subtracting Mixed Fractions (G) Answers

Find the value of each expression in lowest terms.

1. $6\frac{1}{4} - 3\frac{3}{44}$
$= \frac{35}{11} = 3\frac{2}{11}$

2. $3\frac{3}{38} - 2\frac{3}{10}$
$= \frac{74}{95}$

3. $6\frac{1}{6} - 1\frac{11}{14}$
$= \frac{92}{21} = 4\frac{8}{21}$

4. $7\frac{7}{15} - 2\frac{27}{40}$
$= \frac{115}{24} = 4\frac{19}{24}$

5. $4\frac{7}{20} - 3\frac{1}{3}$
$= \frac{61}{60} = 1\frac{1}{60}$

6. $11\frac{1}{6} - 2\frac{11}{12}$
$= \frac{33}{4} = 8\frac{1}{4}$

7. $4\frac{9}{14} - 2\frac{16}{21}$
$= \frac{79}{42} = 1\frac{37}{42}$

8. $5\frac{1}{3} - 2\frac{11}{13}$
$= \frac{97}{39} = 2\frac{19}{39}$

9. $15\frac{3}{4} - 2\frac{1}{3}$
$= \frac{161}{12} = 13\frac{5}{12}$

10. $11\frac{1}{3} - 8\frac{11}{19}$
$= \frac{157}{57} = 2\frac{43}{57}$

11. $3\frac{28}{39} - 3\frac{4}{21}$
$= \frac{48}{91}$

12. $4\frac{1}{2} - 1\frac{13}{38}$
$= \frac{60}{19} = 3\frac{3}{19}$
